Re: Minimal Impact of Coronavirus on Dialight Operations

Dear Customer:

Dialight is closely monitoring the impacts of the coronavirus (COVID-19) in China and elsewhere. We have been in constant contact with all of our suppliers regarding their operational status and assessing potential impacts to our customers.

Accordingly, we are ensuring that all potentially impacted suppliers are updating their pandemic response plans, and communicating potential shortages and mitigation plans. Further, we are evaluating secondary impacts on shipping and sourcing of key materials to minimize any secondary impacts.

While none of Dialight's manufacturing or distribution facilities are located in China, we do have some components that are manufactured there.

At this time, we are pleased to report that the impact to our business is negligible with limited, if any, impact on our supply chain or ability to deliver products to customers.

Significant finished goods inventory is available from our Dialight manufacturing and distribution sites. We have strong stocking programs internally and with our regional vendors as well as strong Risk Mitigation programs including fully approved alternate components for our products, should one source be unavailable. While we have great confidence in our ability to weather this event, the situation is fluid and could change on short notice.

Dialight is committed to ensuring the integrity of our supply chain and taking action to avoid or minimize any disruption to our customers.

If you have any questions regarding product availability and timing, please contact your Customer Service Representative.

Best regards,

Fariyal Khanbabi
Dialight Group Chief Executive
